

wherein at least one instantiation of the browser application is configured to exchange messages with at least one other instantiation of the browser application.

22. A communications apparatus for transferring electronic data to users of a communications system, the apparatus being configured to:

establish a connection between a client and a host, the client including a browser application configured to render data encapsulated in a standard Internet content format;
receive electronic data from the host in response to a data request transmitted from the client; and

at the client, simultaneously execute multiple instantiations of the browser application in response to the electronic data received from the host,

wherein at least one instantiation of the browser application is configured to exchange messages with at least one other instantiation of the browser application.

23. A communications method for transferring electronic data to users of a communications system, the method comprising:

establishing a connection between a client and a host, the client including a browser application configured to render data encapsulated in a standard Internet content format; and
transmitting electronic data from the host in response to a data request received from the client,

wherein the electronic data comprises instructions for simultaneously executing multiple instantiations of the browser application, at least one instantiation of the browser application being configured to exchange messages with at least one other instantiation of the browser application.

Add claims 24-39.

--24. The communications method of claim 1 wherein each instantiation of the browser application is configured to exchange messages with at least one other instantiation of the browser application.

25. The computer program of claim 17 wherein each instantiation of the browser application is configured to exchange messages with at least one other instantiation of the browser application.

26. The communications method of claim 1 wherein the messages exchanged between instantiations of the browser application include state information.

27. The communications method of claim 1 wherein the messages exchanged between instantiations of the browser application include session content.

28. The communications method of claim 1 wherein the messages exchanged between instantiations of the browser application include communications parameters for maintaining a connection between instantiations of the browser application.

29. The computer program of claim 17 wherein the messages exchanged between instantiations of the browser application include state information.

30. The computer program of claim 17 wherein the messages exchanged between instantiations of the browser application include session content.

31. The computer program of claim 17 wherein the messages exchanged between instantiations of the browser application include communications parameters for maintaining a connection between instantiations of the browser application.

32. The computer method of claim 1 wherein a first instantiation of the browser application is dedicated to providing a first type of online service and at least one other instantiation of the browser application is dedicated to providing a second and different type of online service.

33. The computer method of claim 32 wherein the first type of online service is an OSP service and the second type of online service is an instant messaging service.

34. The computer program of claim 17 wherein a first instantiation of the browser application is dedicated to providing a first online service and at least one other instantiation of the browser application is dedicated to providing a second and different online service.

35. The computer program of claim 34 wherein the first online service is an OSP service and the second online service is an instant messaging service.

36. The computer method of claim 1 wherein a first instantiation of the browser application is configured to receive content from a second instantiation of the browser application, said content being stored on a server that is not otherwise configured to communicate with the first instantiation of the browser application.

37. The computer method of claim 36 wherein the first instantiation of the browser application is configured for email, the second instantiation of the browser application is configured for instant messaging, and the server is an instant messaging server.

38. The computer program of claim 17 wherein a first instantiation of the browser application is configured to receive content from a second instantiation of the browser application, said content being stored on a server that is not otherwise configured to communicate with the first instantiation of the browser application.

39. The computer program of claim 38 wherein the first instantiation of the browser application is configured for email, the second instantiation of the browser application is configured for instant messaging, and the server is an instant messaging server.--
